

AV4 DAYLATCH GUIDE

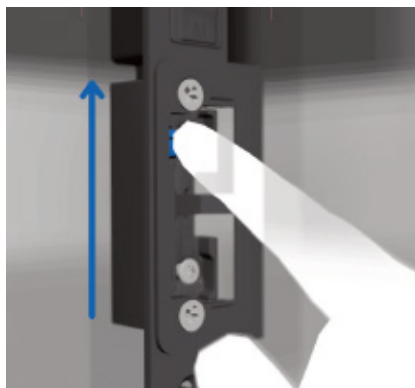

enti
COMPOSITE

How to use the AV4 Daylatch

Derived from the industry leading AV2, the newest member of the Winkhaus autoLock family has a new hook design which dramatically widens the operational tolerances, increasing the life of the lock operation against outside factors and has a 40% reduced operation forces compared to the AV2.

The Daylatch features an easy to operate switch which can be flipped to switch between automatic locking and re-entry without a key. This is most useful to know that you family is secure, but by the flip of a switch located in the centre keep of the frame you can easily push the door open if nipping out to get groceries from your car or if the kids are playing in the front garden.

Switch the blue switch upwards to re-activate magnet for automatic locking function

Switch downwards to de-activate magnet for daytime feature for easy push-open functionality

Daylatch located here with Contemporary Lock

Daylatch located here with Heritage Lock
