

STABLE LOCK OPERATION GUIDE

ent

COMPOSITE

Your Stable Door Lock

Winkhaus' latest innovation, the Interlocking Stable Door Locking Solution, featuring separate deadbolts and hooks for both the upper and lower parts of the Stable Door.

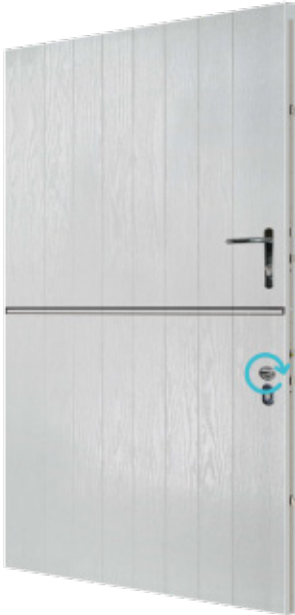

The stand out feature is the integrated shootbolt, which removes the need for additional hardware to connect the two halves of the Stable Door, improving aesthetic and simplifying the fabrication process.

Removal of the additional hardware also allows greater flexibility for positioning of a drip bar and potential close proximity between the additional hardware and the handle.

Lock Operation

Closed

When both leaves are closed, turn bottom thumbturn to engage hooks

Open Top Leaf Only

1. Turn bottom thumbturn on top leaf
2. Operate handle

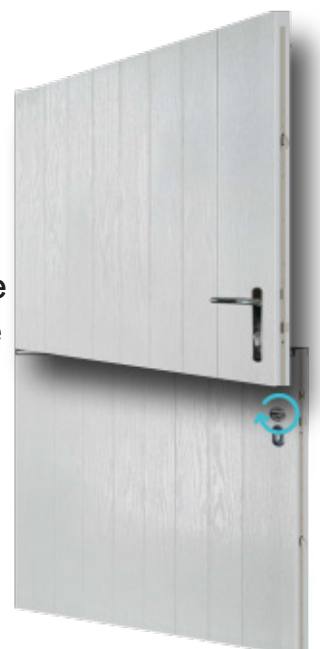

Open as one leaf

1. Turn bottom thumbturn anti-clockwise to engage interlocking pin
2. Push down on top leaf handle

Easy Access

If the top leaf is open and you want quick access in and out, turn the bottom thumbturn clockwise and the door will use the roller latch. This will allow push access for the bottom leaf
